

Stay out of the Doghouse...

We've seen it all... pumps covered by coolers, garbage bags, plastic tubs and, of course, dog houses. These unsightly solutions don't protect the pump, leading to an ugly, ongoing problem. Critters invade, water leaks, and pumps are damaged from excess heat. It's no way to build a reputation as a professional contractor.

With different pump sizes and configurations, professionals need a flexible solution to house a wide variety of pumps.

Now there's a better way to house a pump.

The Munro Universal PRO Enclosure is a professional, attractive and safe way to house a pump and controls – no doghouse needed!

With the Universal PRO Enclosure, you finally have a better way to house a pump, at a great price! The Universal PRO Enclosure accommodates most pumps up to 3 horsepower and provides a rot free, maintenance-free and vandal resistant enclosure that looks good on both residential and commercial sites, eliminating hammers, nails, superglue and shingles.

Designed specifically for a pump, the powder-coated stainless steel enclosure includes inlet and outlet ventilation points, mounting for a pump control box, and security features to keep your investment safe.

Easy – Order the enclosure separately or include all the fittings you need. Assembly is simple with the hand-help rivet gun provided.

Flexible – Pump can face either direction, as the side panels interchange.

Professional – With a Universal PRO Enclosure, your pump installation looks professional and is protected. This enclosure is built to last.

Better – Durable, adaptable, and easy to assemble and use.

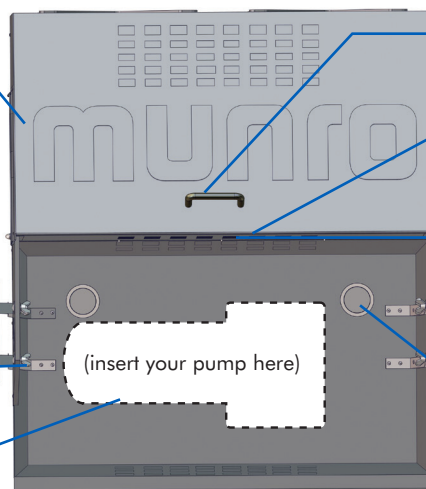

ENCLOSURE – Powder-coated stainless steel offers durable, non-corrosive housing to stand up to the elements.

Hand-held rivet gun included for easy assembly.

PUMP CONTROL MOUNTING – Designed to fit a wide range of pump control panels.

UNIVERSAL DESIGN – Interchangeable side panels allow for pump to face left or right.

PUMP – Universal design will fit a wide-range of irrigation pumps.

HANDLE – Stainless steel handle for easy accessibility.

SECURITY – Lockable.

SELF COOLING – Vented for air flow to keep the pump cool.

ADJUSTABLE – Height adjustable intake, side panel and pump base.

DISCHARGE – Discharge holes are knock-outs for easy installation.

Did You Know?

Centrifugal pumps need airflow to cool the motor for optimal longevity.
