## Selecting a pump is easy.

Determine the required discharge pressure in PSI at the pump.

PSI requirement for largest zone (PSI provided by sprinkler head manufacturer x number of heads). Add for pressure losses due to friction loss or elevation change. Subtract for any incoming pressure.

- Determine the GPM required by the largest zone.

  GPM requirement for the largest zone (GPM provided by sprinkler head manufacturer x number of heads).
- At the intersection of these two numbers is the desirable Munro pump.
